**Re: 10 TRINITY SQUARE, LONDON  
ADDENDUM TO SERVICES STRATEGY  
To be read in conjunction with Services Strategy, November 2008  
DSA Engineering Reference No: 06.10421.00**

Dear Alex

The revised planning application is addressing the relocation of the vehicle lifts from the south to the north pavilion and the size reduction of the pavilions.

The revised architecture of the pavilions result into the following changes in the services layout:

- Installation of 3/no. chillers over the north pavilion and 1/no. chiller over the south pavilion; The original planning application called for 2/no. chillers over each pavilion
- Redistribution of the ventilation services within the basements in order to suit the revised pavilion layouts and associated intake / extract ventilation risers.

The revised planning application in connection with the redesign of the pavilions require no amendment to the overall design concept described in the Energy Statement and Services Strategy Reports.

The Services Strategy outlined in DSA Engineering original Energy Statement and Services Strategy Reports can be implemented within the new arrangement.

Regards,

Nicholas Polihronidis  
Director
